Beijer Electronics Group establishes a production unit in Malmö, Sweden

The Beijer Electronics business entity has decided to establish a unit for the production of HMIs in the X2 family in Malmö, Sweden. The main motives are to minimize the risks and to get closer to large markets and important key customers with shorter lead times. The establishment initially entails 15 new jobs in Malmö.

"We operate in markets with strong underlying growth and demand for our products is increasing. Therefore, we choose to establish a complementary production unit in Malmö that will primarily serve our European customers and contribute to increased redundancy. In the long run, the establishment will also contribute to reduced climate footprint and lower transport costs", says Jenny Sjö Dahl, President and CEO of BEIJER GROUP.

The new unit will be co-located with the existing European logistics center in Malmö and is expected to be ready for the first deliveries already in the second half of 2023. The decision does not affect Beijer Electronics' existing production facility in Taiwan.
